Summary

Computer Science undergraduate with experience across AI-focused startups in GTM strategy, outbound automation, market research, and technical operations. Worked with tools like Apollo.io, Clay, n8n, SQL, and Python to support pipeline growth, lead intelligence, and analytics. Built AI-powered full-stack projects using FastAPI, React, and transformer-based systems, with growing focus on LLM workflows, RAG pipelines, and AI product strategy.

Work Experience

GTM Consultant, *Anything.ai*

01/2026 – 08/2026 | Remote

- Closed **15 enterprise deals totaling ₹35L in ACV** (avg deal size ~₹2.33L, top deal ₹5L), sourced against **₹40L in total pipeline** — a **~87.5% pipeline-to-close conversion rate**.
- Executed **10,000+ outreach touches** across LinkedIn, email, and cold calling, achieving a **40% reply rate** and generating **~6 booked meetings/week**.
- Maintained an average **15–18 day sales cycle** from first touch to close.
- Worked directly with the founder and co-founder as the GTM execution layer, owning the full deal lifecycle — prospecting, outreach, qualification, demo, negotiation, and onboarding.
- Designed and built automated outbound infrastructure using **n8n**, **Apollo.io**, and **Clay**, replacing manual prospecting with a repeatable, iterated system.
- Built qualification pipelines for **YC-backed and a16z-ecosystem startups**, applying ICP criteria based on funding stage and investor signals to reduce wasted outreach.
- Ran product demos and nurturing conversations, and managed onboarding coordination post-close.
- Maintained CRM hygiene and pipeline reporting, giving founders forecast visibility without manual chasing.

Business Development Intern, *Zeex AI (IIT Madras Startup)*

02/2026 – 03/2026 | remote

- Supported go-to-market execution and outbound growth initiatives for AI-focused products, working closely with startup leadership and cross-functional teams.
- Built and managed outbound lead-generation workflows spanning LinkedIn outreach, CRM systems, and prospect-intelligence tools.
- Conducted market research and startup-ecosystem analysis to identify high-potential client segments and partnership opportunities.
- Drove lead qualification and pipeline movement, improving conversion efficiency across the sales funnel through structured client communication.
- Supported product demos and early-stage customer interactions, contributing to client onboarding and business acquisition.
- Bridged technical and non-technical operations, connecting product positioning, outreach strategy, and hands-on execution.
- Contributed to GTM strategy development and growth experimentation to scale outreach and improve engagement performance.

Research Intern, *StarterYou (New York Startup)*

02/2026 – 03/2026 | New york (remote)

- Conducted market and competitive research
- Analyzed user segments and growth opportunities
- Supported outbound research for lead generation

- INTERN - CEO OFFICE, Xponentium India**

10/2025 – 01/2026 | Gurugram, Haryana (Remote)
- Conducted end-to-end candidate screening, including resume evaluation, initial technical assessments, and profile shortlisting across technical and non-technical roles.
 - Scheduled and conducted preliminary as well as technical interviews to evaluate candidate skills, experience, communication, and role alignment.
 - Interviewed and assessed 200+ candidates while managing candidate pipelines and maintaining structured recruitment workflows.
 - Recognized as a top-performing contributor in talent acquisition operations for consistently supporting hiring efficiency and candidate management.
 - Collaborated closely with hiring managers and leadership teams to understand technical hiring requirements, role expectations, and recruitment priorities.
 - Maintained accurate applicant tracking records, interview feedback, and hiring status updates using Airtable and structured documentation systems.
 - Prepared recruitment reports, hiring insights, and pipeline updates for the CEO and senior management team.
 - Supported technical outbound operations and coordination workflows, assisting in communication, sourcing, and operational execution across hiring initiatives.
 - Documented recruitment activities, interview outcomes, and pipeline progression to improve hiring visibility and process organization.
- BUSINESS DEVELOPMENT AND GROWTH ANALYST INTERN**

11/2025 – 01/2026 | Maharashtra, India (Remote)
- Momento (Humora Technologies)*
 - Analyzed business data using SQL and Python to extract meaningful insights for decision-making
 - Cleaned and structured large datasets to ensure accuracy and usability
 - Identified trends, performance metrics, and growth opportunities through data analysis
 - Supported go-to-market (GTM) strategy with analytical insights and reporting
 - Created clear, actionable recommendations for leadership and cross-functional teams
 - Assisted in tracking business performance and optimizing strategy using data-driven approaches

Education

- B.TECH IN COMPUTER SCIENCE AND ENGINEERING**

2023 – 2027 | Kolkata, India
- RCC Institute of Information Technology, MAKAUT*
 - CGPA: 9.2
- CLASS XII (CBSE), Aditya Birla Vani Bharati**

2023 | India
- Percentage: 94%
- CLASS X (CBSE), Techno India Public School**

2021 | India
- Percentage: 94%

Technical Competencies

- Languages:-** Python, JavaScript, Java, C
- Frontend:-** React.js, Next.js, Tailwind CSS
- Backend:-** Node.js, Express.js, FastAPI
- AI/ML:-** Transformers, OpenCV, Hugging Face, RAG Pipelines
- Databases:-** MongoDB, MySQL
- GTM & Operations:-** Apollo.io, Clay, n8n, Airtable, CRM Systems
- Tools:-** Git, GitHub, Linux, REST APIs, Figma

Projects

Kairo — AI-Powered CRM & Sales Intelligence Platform [↗](#)

Tech Stack: Python, SQL, DuckDB, Parquet, [scikit-learn / LightGBM], MLflow, Google Gemini API, GitHub Actions, JavaScript, Vercel

- Built a CRM simulator generating **18 months of synthetic B2B SaaS sales data** (reps, accounts, leads, deals, stage history, activities), modeled in **DuckDB** with daily **point-in-time snapshots** to prevent data leakage.
- Trained **lead-scoring and win-probability models** tracked in **MLflow**, and found and removed a **target-leakage feature** (rep forecast). In the backtest, deals scored 90%+ **won ~96% of the time** across 195 deals.
- Generated **AI deal briefings** with the **Gemini API**, grounded only in model outputs and flagging risk signals such as close-date slippage and rep-vs-model gaps. Added retry/backoff to handle free-tier rate limits.
- Built **explainable next-best-action recommendations** and a backtested pipeline forecast, automated daily with **GitHub Actions** and served on **Vercel**.

Singlestack-ob Discovery & Application Tracking Platform [↗](#)

Tech Stack: Python, SQL, DuckDB, Parquet, GitHub Actions, Supabase (Postgres, Auth, RLS), JavaScript, Vercel

- Built an end-to-end data pipeline that ingests job postings from **[N] sources** (job boards/APIs), then cleans, deduplicates and normalizes **[X]+ listings** into a unified schema
- Designed **[batch/scheduled] ETL** with [tool] to refresh listings every **[interval]**, with incremental loads and idempotent upserts so reruns are safe
- Modeled a relational schema covering jobs, companies and applications, which lets users track application status through a **[N]-stage pipeline** (saved → applied → interview → offer)
- Built a search and filter layer over role, location, seniority and recency, and deployed the full-stack app on **Vercel**
- (If true) Extracted company hiring-velocity signals from posting trends to surface fast-growing companies

Safar - AI-Powered Travel Planning Web App [↗](#)

Tech Stack: MongoDB, Express.js, React.js, Node.js, Tailwind CSS, Google Maps API, OpenWeather API

- Built a full-stack travel platform (MERN) generating AI-assisted itineraries that surface hidden gems, local food spots, and lesser-known attractions — not just standard tourist listings — alongside collaborative trip-planning features.
- Integrated Google Maps and OpenWeather APIs for real-time location intelligence and weather forecasting, plus custom budget-estimation logic to ground itineraries in practical constraints.
- Built responsive frontend workflows and UI components in React.js and Tailwind CSS from Figma designs, covering the full itinerary-creation and collaboration flow.
- Implemented dynamic personalization that adapts recommendations to individual user preferences and activity inputs, rather than static one-size-fits-all itineraries.

Matilda - Neurodiversity Support and Education Platform [↗](#)

Tech Stack: React.js, Next.js, FastAPI, Python, OpenCV, Tailwind CSS

- Built an inclusive learning platform for neurodiverse children, using adaptive modules and picture-based comprehension exercises tailored to different cognitive learning needs and learning disabilities.
- Implemented emotion recognition and visual-aid generation using OpenCV and Python, helping the platform respond to a child's engagement and comprehension in real time during learning sessions.
- Built personalized recommendation workflows surfacing educational resources and support materials matched to each child's learning profile and progress.
- Designed responsive, accessibility-focused UI/UX in Figma and React.js/Next.js, prioritizing simplicity and low cognitive load for young neurodiverse users.

Synthify - On-Device Generative AI Suite

Tech Stack: React.js, Electron, FastAPI, Hugging Face Transformers, Stable Diffusion, ControlNet

- Built a cross-platform offline AI desktop app unifying text generation, image generation, paraphrasing, and super-resolution into one system — no internet dependency for core inference.

- Integrated quantized transformer models and lightweight diffusion pipelines (Stable Diffusion + ControlNet) to run generative workloads locally without cloud GPUs.
- Designed a modular FastAPI backend decoupling each AI capability into independent services, with optional Google Cloud Vision and Speech-to-Text integrations for extended functionality when online.
- Engineered for privacy-first, low-latency inference — eliminating recurring cloud API costs and data-exfiltration risk by keeping all model execution on-device.

Certifications & Achievements

Certifications

- Introduction to Artificial Intelligence – NPTEL.
- Introduction to Python Programming.
- Introduction to Java Programming.
- McKinsey Forward Program.

Achievements

- Selected among top teams in Smart India Hackathon (2023, 2024).
- Ranked 7th in Smart Bengal Hackathon.
- Secured 3rd position in INNOVISION Extempore Competition.
- Contributor at GirlScript Summer of Code.
- Received VECC visiting opportunity as Departmental Topper.
